

# Better homes. Better living.

Discover the keys to a healthy, comfortable and efficient home.

A certified ecoSelect® home is designed and built to be healthy, comfortable and efficient through a combination of green building strategies, water conservation features and performance testing.

In addition, a certified ecoSelect® home is inspected and energy rated by a certified third party organization, giving you clear expectations of what your utility bill will be before ever stepping foot in your new home.

For more information, visit ecoSelect® online at [getecoSelect.com](http://getecoSelect.com)

### QUALITY ASSURED

Homes are inspected and verified by a third party to ensure program compliance

### HIGH PERFORMANCE BUILDING ENVELOPE

Advanced framing and air sealing details allow the insulation to better keep heat in during the winter and out during the summer

### PROGRAMMABLE THERMOSTATS

Families customize their heating and cooling system to match their schedules while saving energy

### HIGH PERFORMANCE HVAC

Properly installed heating and cooling systems run quieter and more efficiently while enhancing the home's comfort

### ENERGY EFFICIENT LIGHTING

Efficient lighting provides a 75-80% energy savings and last 10-25 times longer than traditional incandescents

### WATER EFFICIENCY

High efficiency WaterSense® labeled fixtures save water without sacrificing performance

The ecoSelect® program combines performance testing and targeted energy efficiency features into a comprehensive program package that addresses energy efficiency, water efficiency and indoor air quality within your home.

ecoSelect® specifications and requirements are verified by a certified independent third party energy rater, responsible for ensuring that the home you are buying has met all of the prescriptive requirements and features of the program.
